Priority Applications (No Type Date): JP 90125424 A 19900517

Abstract (Basic): JP 4021633 A

Method comprises supplying useful microbe that constitute microflora in the cavity and/or growth factor of the useful microbe while maintaining the pH below 4.5 to prevent invasion or growth of destructive microbe. A compsn. which contains at least one of the microbes or a growth factor of the useful microbe or a useful substance produced by the useful microbe e.g. lactic acid, acetic acid, niacin etc. is also claimed.

USE/ADVANTAGE - Useful microflora in vital inferior oral cavity can be maintained and controlled exactly. Healthiness of the pref. microbe host ecosystem can be secured, and can contribute to preventing infection, without side effects.

In an example, L. acidophilus (10 power 8/ml) and saline contg. 1% glucose (100ml) was used by healthy women 50-61 years old twice a day. pH and cell count of L. acidophilus in vagina were measured before use and after use of 1 week. L. acidophilus increased remarkably, and pH was at the same level as that of young women (below 4.5). (4pp Dwg.No.0/0)
